### **DETAILED ACTION**

This is the first Office Action for application number 10/737,048 Bracket Assembly, filed on 12/16/03. Claims 1-3 are pending.

#### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –  
(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by United States Patent No. 5653147 to Kelley et al.

The patent to Kelley et al. discloses an electrical connector having a body (10) with two diameters (20, 24), the second being larger than the first.

The patent to Wilhelm Kelley et al. also teaches a support (28), having a major part (34) that is a substantially rigid and has an aperture having a center opening with a third diameter larger than the first, but smaller than the second diameter, and a plurality of deflectable spokes (36) which diverge away from a plane of the major part of the support, the second diameter (24) of the connector limiting the movement of the connector through the support (28).

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The following documents show various supports with resilient spokes
